

# Waves

Copernicus Marine Environment Monitoring Service

- **Presentation of the new products available in the CMEMS catalogue: WAVE products.**
- **Copernicus catalogue: <http://marine.copernicus.eu/>**
- This CMEMS module shortly present information on Wave products based on the Copernicus Marine Service website.

- **Copernicus Marine Environment Monitoring Service (CMEMS) new products: WAVE PRODUCTS**
- **From 19<sup>th</sup> april 2017 : wave products enter the Copernicus Marine Service.**
- **Major improvement:**
  - Wave products from models
  - Wave products from satellite
  - Wave products from in-situ observations
  - Full, Free and Open policy

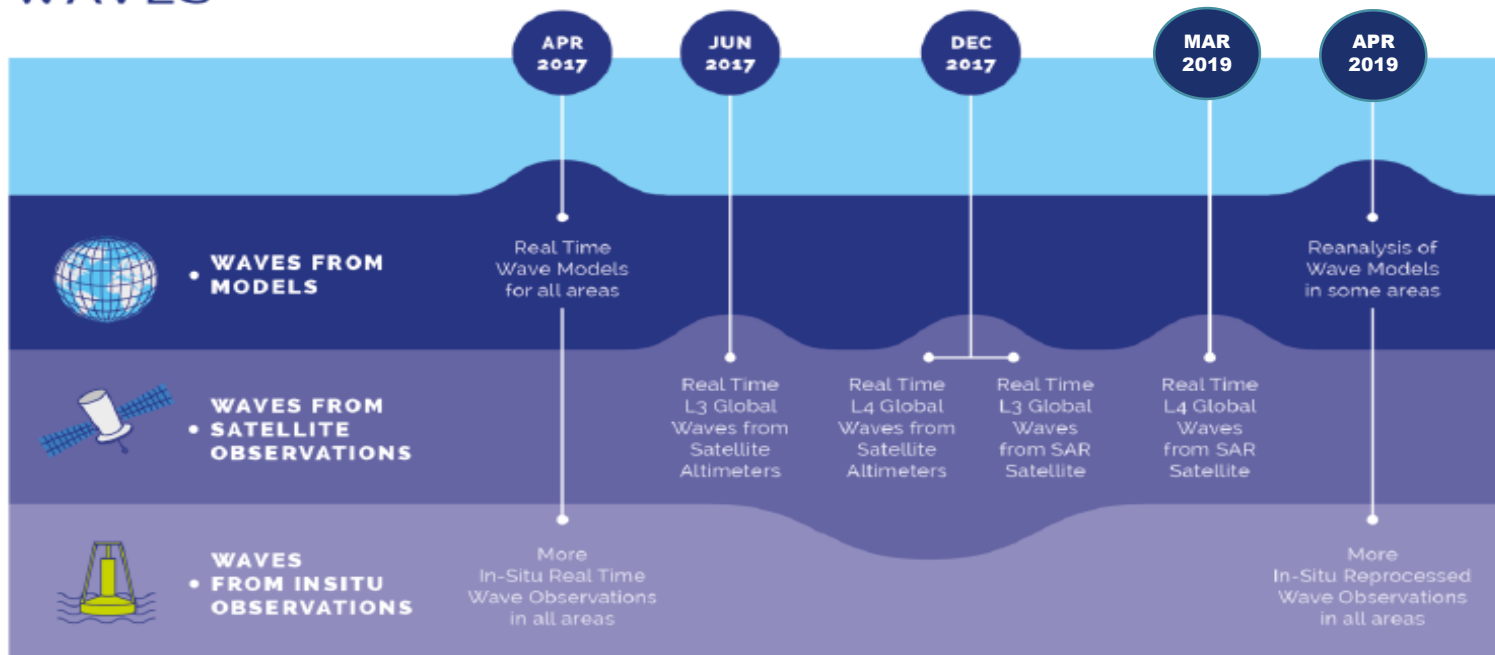

**FULL, FREE and OPEN**

Monitoring

# Waves Product Roadmap

## WAVES

Roadmap extracted and adapted from Copernicus Marine Service web site, realised by Mercator Ocean

European  
Commission

In the Copernicus Marine Service, real time global wave products from satellite are sorted into 2 categories:

## - **Waves from Altimeter**

- Wave parameter available:
  - significant wave height ( $H_s$ )
- Temporal resolution: 3h
- From 07/2017: L-3 processing real time global wave product are delivered.
- From mid 2019, L-4 real time global product (100km spatial resolution)

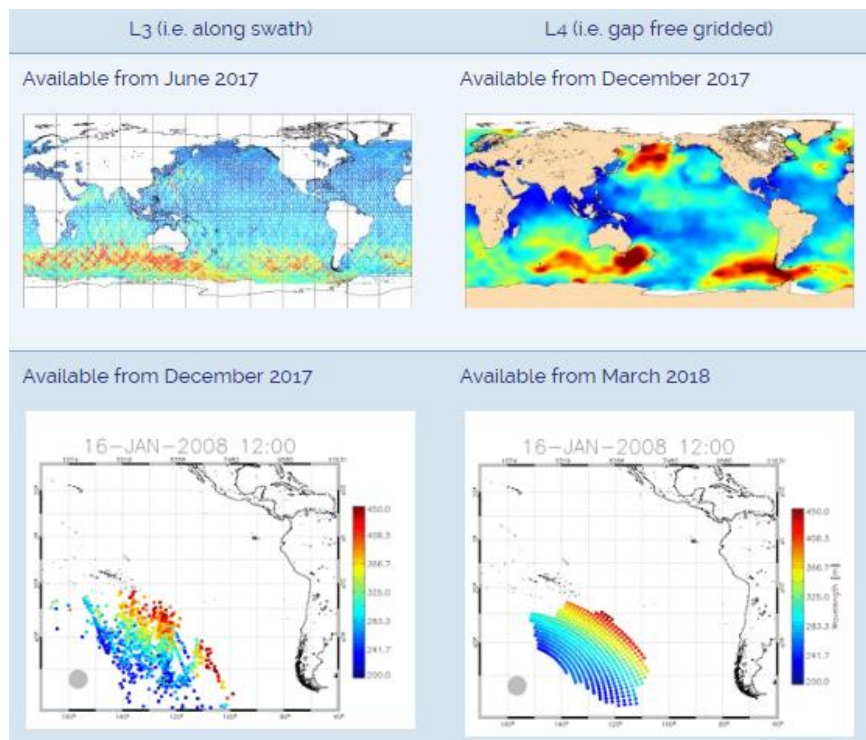

## - **Waves from Synthetic Aperture Radar (SAR).**

- Wave parameters available:
  - significant swell height ( $H_s$ ), peak period ( $T_p$ ), peak direction ( $Dir$ )
- Daily temporal resolution.
- From 03/2018, real time global L-3 wave products are delivered (Sentinel-1).
- From mid 2019, real time global L-4 wave product (from Sentinel-1A and -1B) (100 km spatial resolution)

from Copernicus Marine Service web site

- **Large user panel** (in various market) in need of wave information in all ocean basins and **the blue economy** shall profit from those new open and free waves products:
  - Maritime transport sector,
  - Shipping industry,
  - Coast guards,
  - Port authorities,
  - Research and academic community.
- **Example of applications:**
  - Secure operations at sea,
  - Save fleet fuel consumption using more accurate routing,
  - Prevent from potential ship and platform oil spill drift,
  - Research topics (ocean-atmosphere interaction,...)
  - Reducing the fossil print (using the energy of the sea to product electricity for ex.)

**Copernicus Marine Service wave products = key input** for such technologies, as they shall allow **estimating the ocean energy resources available** in various areas in the past and the future, help minimizing the risks for operations at sea, and provide with relevant information for the mandatory environmental monitoring of offshore ocean.

*The Great Wave off Kanagawa by Hokusai*

# WAVE PRODUCT from models

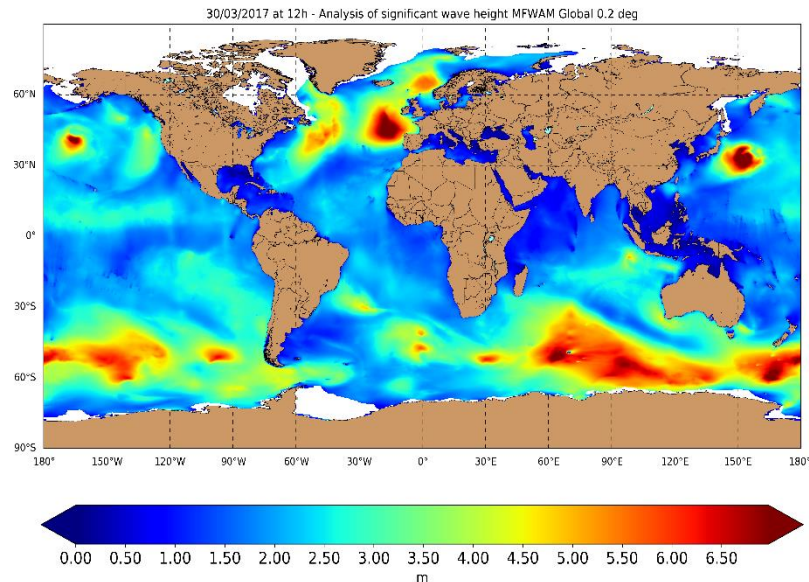

Real-time waves data from models is available in all geographical areas :

- Global Ocean
- Mediterranean
- Black Sea
- Baltic Sea
- Arctic Ocean
- Iberian-Biscay-Irish Seas

Different parameters are provided such as:

- Significant wave height
- Swell (1 and 2)
- Stokes drift...

A more than **two year archive** is provided, as well as **hourly forecast** fields for the next 5 days updated daily, for all geographical areas.

*from Copernicus Marine Service web site*

## WAVE from in-situ platforms:

Availability of **wave observations from in situ platforms** is also strengthened for real time wave observations, and from April 2018 for In situ wave products covering the last 20 years. Parameters like significant wave height is included.

*Location of real time in situ wave observations in the region of Iceland from Coriolis-Ifremer/ EU Copernicus Marine Service*

# CMEMS WAVE product: View the product

- Go to the Copernicus Marine Service : <http://marine.copernicus.eu>

The screenshot shows the Copernicus Marine Service search results page. The top navigation bar includes links for OCEAN PRODUCTS, OCEAN MONITORING INDICATORS, OCEAN STATE REPORT, GETTING STARTED, MY CART, and My Account. The main content area displays search results for 160 ocean products. The first three results are visible:

- GLOBAL\_ANALYSIS\_FORECAST\_PHY\_001\_024**: GLOBAL OCEAN 1/12° PHYSIC'S ANALYSIS AND FORECAST UPDATED DAILY. Model: GLO. Parameters: T bottom T S SSH LV MLD SIC SIT SIUV. Resolution: 0.063 degree x 0.063 degree (50 depth levels). Time range: From 2016-01-01 to Present. Frequency: monthly-mean, daily-mean, hourly-mean. Includes a world map visualization.
- GLOBAL\_ANALYSIS\_FORECAST\_BIO\_001\_014**: GLOBAL OCEAN BIOGEOCHEMISTRY ANALYSIS AND WEEKLY FORECAST. Model: GLO. Parameters: CHL PHYC O2 NO3 PO4 SI FE PP. Resolution: 0.5 degree x 0.5 degree (50 depth levels). Time range: From 2012-01-01 to Present. Frequency: weekly-mean. Includes a world map visualization.
- GLOBAL\_ANALYSIS\_FORECAST\_PHYS\_001\_016**: GLOBAL OCEAN 1/4° PHYSIC'S ANALYSIS AND FORECAST UPDATED DAILY. Model: GLO. Parameters: T bottom T S SSH LV MLD SIC SIT SIUV. Resolution: 0.25 degree x 0.25 degree (43 depth levels). Time range: From 2016-03-02 to Present. Frequency: daily-mean, hourly-instantaneous. Includes a globe visualization.

Each result includes options for 'MORE INFO', 'ADD TO CART', 'WMS', and 'Sub-setting'. A search sidebar on the left allows filtering by regional domain, parameters, temporal coverage, and product with depth level.

- ... To perform the downloading step, the registration to CMEMS is needed !
